**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 32, 33, 35, 36, and 41-44 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

3. In the amendment dated 04/28/08, applicant amended independent claim 32 to recite that the semiconductor material "is a (100) surface of a semiconductor material selected from the group consisting of silicon, germanium, silicon-germanium and silicon-carbide." While the subject specification discloses Si(100) surfaces (see, for instance, paragraphs [0017]-[0019]), the Examiner was unable to find support for (100) surfaces of the other materials recited in the amended claims. Additionally, the applicant failed to point to specific support for the limitation at issue. The specification as originally filed simply does not describe the claimed invention in sufficient detail that one skilled in the art can reasonably conclude that the inventor had possession of the claimed invention. See MPEP 2163(I).

4. Moreover, with respect to germanium, silicon-germanium and silicon-carbide, to the extent that the amendment at issue excludes crystal orientations of the recited materials other than (100) orientations, the original specification fails to support such an exclusionary proviso. It is well settled that any negative limitation or exclusionary proviso must have basis in the original disclosure. See MPEP 2173.05(i). Thus, since applicant is excluding crystal orientations other than (100) regarding germanium, silicon-germanium and silicon-carbide in a manner that is not supported by the original disclosure, it is the Examiner's position that the limitation constitutes new matter.
